eval + control → optimize

Chang Liu · Senior Product Manager, Microsoft

WHY TRUST IS THE BARRIER

Top agent risks

Source: SailPoint

WORKED EXAMPLE

A Bank Manager Agent

Checks balances & history · prepares, approves & executes transfers · freezes flagged accounts — six tools.

The safety bar is **company policy**, not generic toxicity.

EVALUATE → CONTROL → OPTIMIZE

The inner loop to power the outer loop

ASSERT and Agent Control Specification (ACS) work together to close the eval-fix loop across the AI development lifecycle.

Pareto: fewer violations *and* less over-refusal

The control plane moves BOTH axes down

realistic bank agent · n=100 · gpt-5.5 judge · manual prompt tuning didn't help here

Adaptive Spec-driven Scoring for Evaluations and Regression Testing

Agent Control Specification
